Product News: Digi Modem

In our continued commitment to providing you with the latest product developments we introduced the new Digi Modem c/w Arm (EUR-073-ARM). This has now been available for several years, to supersede the original Digi Modem (EUR-052).

To make the switch-over from the old Digi Modem (EUR-052) as smooth as possible we have continued to run both products alongside each other, but unfortunately we are now unable to supply the Digi Modem (EUR-052) with immediate effect.

The Digi Modem c/w ARM (EUR-073-ARM) has the following great features:

- Up/Downloading from PC to alarm panel (with Virtual Keypad functionality soon to be introduced)
- Automatic Remote Maintenance – send an engineer to site only once a year!
- SMS text messaging, with full text descriptors
- ARC signalling with the following protocols; Fast Format, Contact ID, SIA
- Up to 4 SMS or ARC numbers can be programmed, with individual back-up numbers for each ARC

If you require any further information on the Digi Modem or any of our other products please do not hesitate to contact our marketing department or visit our website at www.castle-caretech.com.
