

A close-up, slightly blurred photograph of several iD Plus biscuits. Each biscuit is a dark, rectangular metal component with a circular hole, attached to a pair of colored wires (yellow and blue). They are arranged in a diagonal line from the top left towards the bottom right.

iD marches on...

Castle Care-Tech Ltd are pleased to announce that we are licensed users of the new iD Plus biscuits. The technology of iD has been extended, giving you the installer a much stronger and more versatile product, whilst retaining its simplicity of use and speed of installation.

Increased Area Coverage

iD plus will allow up to 30 biscuits on a total cable length of up to 400m (up from 100m), allowing you to protect a much larger area.

Lower Temperature Threshold

iD plus can operate in temperatures as low as -25°C , and in temperatures as high as 70°C .

Improved Biscuit Numbering

Each biscuit has clear, easily readable label, allowing quicker and easier iDentification.

Compatibility

iD plus biscuits are compatible with all Castle Care-Tech iD panels, and the biscuits can be placed on the same iD lines as the old iD biscuits.
