Castle's Solution to Police Warning

Police are warning rural homeowners and farmers to secure their domestic oil and diesel supplies over fears that they could be a target for thieves due to the soaring fuel prices.

Castle Care-Tech can provide the simple solution to this growing problem with a small wireless transmitter, EE1210W which can be placed inside the screw cap of the oil tank. The magnetic reed switch on this device ensures that if the cap is opened or tampered with, homeowners will be alerted by, at the very least, an audible alert from their security system. On more advanced alarm systems outside security lights can be activated and SMS text messages can be sent or the Alarm Receiving Centre alerted to the unauthorised entry to the storage tank.

Andrew Knights, MD of Castle Care-Tech says, "This product provides the ideal solution to this escalating problem, giving homeowners peace of mind and the means of protecting their property. It is simple to fit and with the use of a wireless expander, is a simple addition to any security system whether it be hard wired or wireless"

Steve Holland, Area Manager South West notes "This is a rapidly increasing problem that Castle can effectively deal with by allowing either a Castle alarm system or another manufacturer's system to be upgraded. The upgrade typically takes less than 2 hours and a number of systems have already been successfully installed."

Andrew adds, "The EE1210W uses enhanced Echostream® 868MHz technology by Inovonics and transmits on a number of different channels providing greater immunity to interference and vast areas can be covered with confidence."

For added protection the transmitter itself also has a case tamper and is provided with a bracket for ease of mounting.

Castle provides the full range of Inovonics wireless equipment along with their own award winning control panels and associated accessories.

Parts required to fit to a Castle Euro ONE panel

Receiver

EUR-037R

If used in iD mode allows up to 29 wireless inputs, or in EoL mode up to 7 wireless inputs.
Wires directly to the RS485 bus.

Transmitter

EE1210W

Contains magnetic reed switch input.
Fully supervised.

Parts required to find any Third Party Alarm System

Receiver

You can wire any of the following receivers into a spare input on the alarm panel:

Receiver	Frequency	Dimension	Power Requirements	Max Current	Number of Transmitters	Open Collector	Relay Outputs
EE4232	868MHz	165x89x25mm	10-14VDC	400mA	32	11 alarm / 1 fault	
EE4216R	868MHz	165x89x25mm	10-14VDC	400mA	16		5 alarm / 1 fault
EE4216	868MHz	165x89x25mm	10-14VDC	400mA	16	8 alarm / 1 fault	
EE4204R	868MHz	165x89x25mm	10-14VDC	400mA	4		4 alarm / 1 fault
EE4204	868MHz	165x89x25mm	10-14VDC	400mA	4	4 alarm / 1 fault	

Transmitter

EE1210W

Contains magnetic reed switch input.
Fully supervised.
